下：小瀉湖是東沙島相當獨特的生態系，棲息著多樣性很高的底棲動物。目前由於移植的紅樹林開始蔓延，使得小瀉湖深度逐年變淺，可能導致這些底棲動物在不久的將來消失。(施習德 攝)

Top: *Gelasimus tetragonon*, with beautiful coloration, is a common fiddler crab around the Small Lagoon of Dongsha Island. (Courtesy of Hsi-Te Shih)

Bottom: Small Lagoon is a unique ecosystem in Dongsha Island, with speciose benthos inhabited. Because the implanted mangroves is expanding, the depth of Small Lagoon becomes shallower, which might cause these benthos to disappear in the near future. (Courtesy of Hsi-Te Shih)
